Music Server

xo|one

simply enjoy the music!

x-odos GmbH is an ambitious company from southwest Germany that has specialized in the field of digital music since its founding.

Each business start-up begins with an idea. If the idea bears up, a product emerges. If the product satisfies customer needs, it will consequently be a success.

In the beginning there was an idea to develop a music server that combined an excellent sound experience and intuitive user convenience.

- Customers "experience music in a new way"
- Customers can "simply enjoy the music"

During the two year development phase we didn't solely rely on the actual measured results. Rather, a lot more time was spent listening and optimizing. Only the highest quality components were used, for example equipment feet from SSC®, rhodium connectors from Furutech® or silver connectors from WBT®.

When we presented the xo|one to established music lovers and dealers from the high-end

scene, they were not only thrilled with the sound but also with the xo app, which we developed ourselves in-house to control the xo|one: It installs itself automatically, it is easy to use and works quickly. There's no annoying waiting time before the next track.

In 2015 we were a newcomer at HighEnd in Munich. HiFi einsnull had just awarded us the "Best of HiFi 2015" award. Since then, our music server has not only established itself in Germany, but also in some foreign markets.

The general trend towards digital music archiving and loss-free streaming is undeniable. The Federal Music Industry Association only recently wrote that "Growth in the digital field (2015) has literally exploded". (Musikindustrie in Zahlen, 2015, p. 10.)

It's no surprise that our digital family has grown. The music streamer xo|stream has been developed in our manufactory in Freiburg with a lot of attention to detail. Use the xo|stream either together with the xo|one or a NAS system, to have your music throughout the house.

Future isn't past! Revolution has just begun...

Testers and customers approve

"The ... xolone is uncompromisingly cultivated for sound ... Even in the network, our approval sample provided a fast response and superb interruption-free performance. "

(Stereo 12/2015)

"The xojone brings a great deal of life into play with great dynamic range ... the playback of high definition titles that have made their way on to hard disks sound great. As soon as you select a high-resolution piece, the room is filled with detailed, rich sounds. It is simply digital music played out on a really high level."

(HiFi einsnull, 2/2015)

"The sound quality of the xolone turns so many established competitors dizzy due to the rousing temperament ... The xolone projects in a naturally strong and forceful way, while at the same time being dry and earthy with very distinctive deep-relief. It's natural, detailed and light-footed mid-range brings 'life into the place', without producing irritating effects or discoloration. The tonal tuning of the server is a lot of fun ..."

(HiFi Digital, 5/2015)

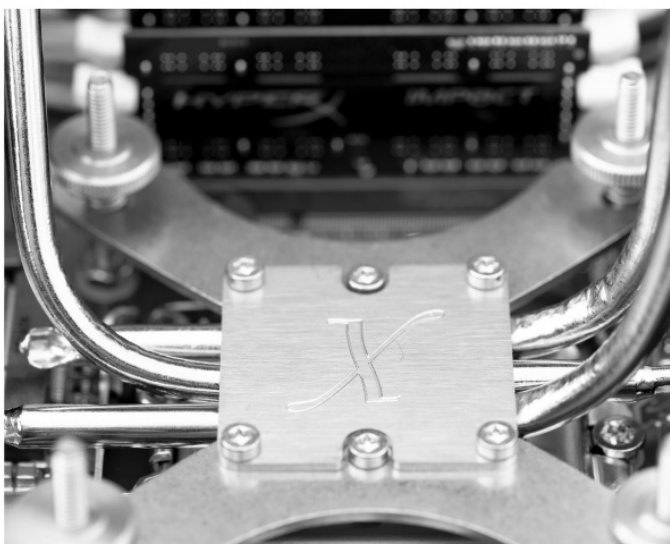

"It must be said how wonderfully intuitive the xojone can be controlled with the tablet program. All the functions are clearly labeled and thoughtfully arranged without overwhelming the user with an abundance of possibilities. The visual design is really appealing ..."

(HiFi einsnull, 2/2015)

"If I was to give a prognosis: You have achieved a great success. Congratulations!"

(customer mail, March 2016)

The xo|one

- stores and manages all the collected music and thus becomes a comprehensive music library
- works using a simple, powerful operating concept
- offers a quick, stable and intuitive app which has been developed in-house for iPad®, iPhone® and iPod®
- plays all popular music formats at the studio quality of 24 Bit / 192 kHz
- supports DoP (DSD over PCM)
- automatically rips CDs in the loss-free FLAC format
- offers the possibility to obtain albums in the best HIGHRESAUDIO® quality directly via the app
- supports the loss free streaming service TIDAL®
- provides a handy radio function
- transmits music throughout the whole house via an integrated DLNA server
- enables easy back-up of all data on external USB storage devices or networks
- is equipped with AES/EBU and S/PDIF for the best digital output
- works with SSD memory for the best performance
- is cooled down passively, and therefore completely silent
- uses only the highest quality components, for example rhodium connectors from Furutech®, silver connectors from WBT® and equipment feet from SSC®
- has jitter of less than 1 ps
- weighs approx. 14 kg at 45cm x 33cm x 14,5cm (LxBxH)

The xo|one comes in silver, black or champagne,
and is available in the following sizes:

1 TB SSD	for up to	3.000 CDs
2 TB SSD	for up to	6.000 CDs
3 TB SSD	for up to	9.000 CDs
4 TB SSD	for up to	12.000 CDs

A subsequent upgrade is possible at any time.
iPad®, iPhone®, iPod® and external hard drives are not included.
